SUMMARY

Full-Stack Engineer with **8+** years of experience building distributed, cloud-native, and event-driven systems with **Node.js (JavaScript/TypeScript), AWS, and Azure**. Strong in microservices, serverless platforms, infrastructure automation, observability, scalability, and secure multi-tenant SaaS systems. Proven track record delivering performance-optimized, secure, and high-availability systems for global products across **Cloud Security, Fintech, E-commerce, Payments, Telecom, and Enterprise SaaS**.

SKILLS

Core Competencies: Distributed Systems, Microservices, Event-Driven Architecture, Serverless Architecture, Cloud-Native Design, Agile, SaaS, Performance Testing, TDD

Languages: JavaScript, TypeScript, Python, Bash

Full Stack Development: NestJS, React, Kafka, Redux, Node.js, Express.js, Flask, REST APIs, gRPC

Databases & Storage: PostgreSQL, Cassandra, DynamoDB, Elasticsearch, Neo4j, Redis

Cloud Platforms: API Gateway, S3, Step Functions, DynamoDB, CloudWatch, CloudTrail; Azure Functions, Event Hub, Event Grid, Logic Apps, Azure Container Apps

DevOps & Infrastructure: Docker, Kubernetes, Terraform, CDK-TF, CloudFormation, Azure Bicep

AI Engineering & Development: Agentic AI, LLM-assisted development, Copilot, Devin, Claude Code, MCP

WORK EXPERIENCE

Qualys

March 2025 – Present

Senior Software Engineer

- Architected and built from scratch a **Zero-touch, Agentless Cloud Security Posture Assessment Platform (CSPM)**, orchestrating snapshot-based scanning of production workloads while preserving workload performance and customer security boundaries.
- Built a unified scanning architecture across **AWS, Azure, GCP, and OCI**, supporting Linux and Windows workloads, VM/instance and machine-image scanning, and OS vulnerability, SBOM, Software Composition Analysis (SCA), Policy Misconfiguration, and Secrets detection.
- Designed Kafka-driven distributed microservices processing **100K+** daily scan lifecycle events, with partition-aware horizontal scaling, idempotent processing, and distributed coordination.
- Engineered Azure cross-subscription snapshot workflows using Managed Identity and customer-managed encryption keys (CMK), eliminating disk-copy operations and **reducing snapshot provisioning time by 60%**.
- Designed secure **private-network** scanning for regulated enterprise environments, enforcing strict tenant and customer-data isolation so data remained within customer-controlled network and encryption boundaries.
- Adopted AI-assisted development workflows for implementation, test generation, debugging, and code review, reducing development and validation cycles by **~65%**.

Tech: Node.js, Python, Kafka, Redis, Terraform, ElasticSearch.

Globant

Jul 2021 – Feb 2025

Senior Software Engineer

- Built Stripe and PayPal-backed **payment** microservices for international checkout, expanding payment coverage across 3 markets and reducing checkout latency by **15%**.
- Implemented a PCI-compliant Hosted Payments Page with tokenization, securing **\$20M+** annual transaction volume and reducing manual payment operations effort by 50%.
- Architected a Kafka- and Redis-based asynchronous transaction ledger to reconcile **20K+** daily settlements, reducing manual reconciliation effort by **40%**.
- Designed **zero-trust RBAC/PBAC** access control with dynamic feature flags, enabling real-time authorization across billing workflows and reducing fraud review time by **18%**.

Tech: NestJS, React, TypeScript, Camunda, Docker, TypeORM, PostgreSQL, MongoDB, Jest.

- Built backend modules for warehouse, inventory, and operations workflows, owning delivery from low-level design to API development, testing, deployment, and production support.
- Integrated UPS, DispatchTrack & OnFleet APIs and **webhooks** using **adapter-pattern**-based microservices, streamlining last-mile logistics workflows and improving the reliability of delivery operations.
- Reduced API latency from 9–13 seconds to ~1–2 seconds using caching, connection pooling, optimized filtering, and database access improvements.
- Improved admin dashboard workflows and backend automation, reducing manual operations effort by 30% and improving internal team productivity.

Tech: Node.js, PostgreSQL, React, MongoDB, Terraform, AWS SQS, SNS, Grafana, Chai, Sequelize.

TrueSparrow Systems - Pune
Software Engineer

Jun 2018 – Nov 2020

Project 1: [Moxie Studios](#)

- Built core modules for an online fitness platform (auth, video, messaging).
- Integrated **OAuth2** (FB/Instagram/Google) to boost seamless user onboarding.
- Implemented browser video recording compression using **FFMPEG** - event-driven **Serverless** Architecture.
- Delivered real-time chat using WebSockets and AWS ALB with distributed queuing to support **50K+** DAU.

Open-source community contributions: [OST Cache](#) (Memcached/Redis/in-memory)

Tech: Node.js, Express.js, MySQL, Cassandra, Socket.io, AWS Lambda, AWS SES.

Project 2: [OST Platform](#)

- Built REST API layer for token economies using **Ethereum** + **Web3** for **10K+** Monthly Active Users
- Resolved recurring production issues across async failures, callback handling, and range errors, reducing backend incidents by **~30%** for transaction-heavy workflows.
- Improved system throughput using sharding, parallel processing, connection pooling, and optimized database access patterns, increasing blockchain data processing capacity by **~25%**.

Open-source community contributions: [OST Block Scanner](#) + [OST View](#)

Tech: DynamoDB, Node.js, MySQL, SQL, RabbitMQ, Web3, Mocha, Chai.

CERTIFICATIONS: [MongoDB SI Associate](#), [Neo4j](#), GCP ACE (ongoing), [Oracle Agentic AI Associate](#)

EDUCATION:

MBA IT & System Management – NMIMS, Mumbai, India

2022 - 2024

B.E. Computer Engineering – PICT, Pune University, India

2014 - 2018
